

Chloroplasts

Chloroplasts**

- oval structures $\Rightarrow$ found in PLANT CELLS ONLY
- contains green pigment called chlorophyll $\Rightarrow$ traps LIGHT ENERGY
- essential for photosynthesis $\Rightarrow$ the process by which plants make food
- no folding of inner membrane
- has stacks of disks $\Rightarrow$ thylakoids
- double membrane

Exam Technique

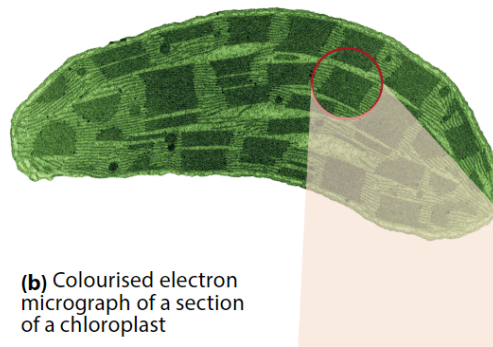

must state $\Rightarrow$ trap light ENERGY

recognizing chloroplasts:

- no folding of inner membrane
- stacks of disks $\Rightarrow$ thylakoids
- double membrane

(a) Three-dimensional diagram of a chloroplast

(b) Colourised electron micrograph of a section of a chloroplast
