

# Periodic Table Main Note

## Definition

Periodic Table is a list of elements arranged in order of *increasing proton* (atomic) numbers

[Features of the Periodic Table](#)

[Group Properties](#)

[Transition Elements](#)

---

## Important Information:

Non metals with 7 valence electrons are generally poor conductors of electricity → as they do not have free electrons to carry an electric charge

Elements with 7 valence electrons usually form diatomic molecules rather than monatomic in their natural state.
